- Scalable
- Encryptable
- Reliable
- Configurable
- Compliant
- Multi-platform
- Simple file retrieval
- Easy management
- Eliminates tape storage
- Releases hours of IT resource
- **Business Continuity**

ARE YOU TOTALLY CONFIDENT YOU COULD QUICKLY AND COMPLETELY RECOVER ALL YOUR DATA FROM TAPE IN A DISASTER?

No matter the size of the business its data is priceless to its success. DSM's electronic vaulting service is one of the simplest and most cost effective ways to protect data and ensure business survival.

Backup Pro is a service which securely transmits your data to an offsite data centre from where you can very simply restore anything from a single overwritten file to an entire copy of your data, if necessary to completely dissimilar hardware. Backup Pro can also be configured with a local storage option for faster recovery of data at LAN speed without the need for an internet connection.

Business Continuity

The ability to recover data and rebuild critical servers is an essential element of Business Continuity. DSM can provide replacement servers configured with the data from your most recent backup. Alternatively you can access your data remotely, or carry out your own system restore at the DSM facility.

Backup Pro can be an integral part of a Business Continuity solution using the full range of DSM services. Server hosting is available in the highly resilient Data Centre as well as workplace recovery suites with a total capacity of over 750 seats.
